WHAT TO EXPECT?

CONGRATULATIONS ON TAKING THE FIRST STEP TO "UNLEASHING" YOUR BOAT WITH **SeaDek**!

OUR PROCESS:

SCANNING YOUR BOAT

First things first, we need to scan your boat's floor plan. On scan day, we will use a digital templating machine to take highly accurate data points which we can then use in our design software. This ensures your Seadek fits exactly for your boat.

DESIGN AND MOCK-UPS

This is the fun part! Picking and choosing your design! On scan day we will show you some colour swatches to choose from, and the days following work closely with you to complete your very own custom floor design.

CUTTING AND INSTALLATION

After your floor design has been approved by you, it is then cut by our CNC/Laser team. After we return with the pieces and begin installation. We clean each surface with acetone, and lay all Seadek flooring with durable long-lasting adhesives.

LUXE MARINE

WHAT DO YOU NEED TO DO?

PREPERATION

Typically, no significant preparation is required on scan day. We simply request that the boat be relatively clean and dry, free of clutter and easily accessible. **We cannot scan a wet boat.** It's important to note that we do not handle any carpet removal.

For the installation day, we kindly request that the boat flooring be thoroughly scrubbed and cleaned, free of any dirt, debris, or obstacles, and completely dry. If the boat is not ready for installation due to any of these reasons, you may be subject to a fee for either cleaning or rescheduling the appointment.

PAYMENT

We require 50% of payment to be collected on scan day, and the remaining balance on install day. Please communicate payment type prior to our arrival.

WE ACCEPT:
CASH, CREDIT*, DEBIT
+ CERTIFIED CHEQUE.

*FEE OF +2.95% FOR CREDIT.

DO YOU HAVE..

GLUED IN CARPET?

WHAT TO DO TO PREPARE YOUR BOAT FOR **SeaDek!**

REMOVING THE CARPET

As we do not provide removal services, you will need to handle this task independently or engage the services of another company. We recommend removing carpet from all horizontal flooring areas designated for Seadek installation. Typically, the sides and other vertical walls adorned with carpet can remain, as they often remain in excellent condition. However, if you choose Seadek application to these vertical surfaces, they may necessitate additional finishing work on your part. Such areas can be further discussed with our installer during your scan day for recommendations.

PREPARING THE FLOOR

Once your carpet has been completely removed, the surface must be prepared for Seadek installation. Ensure that any carpet glue residue is thoroughly removed or, at the very least, sanded smooth, and that there are no protruding high spots. The floor should then receive an even coat or two of paint.

For sealed fiberglass floors, we recommend Rustoleum Enamel paint. If your floor is wood, it's advisable to apply a sealer primer like Kilz, followed by a top coat of low-sheen paint.

Please note: Select a paint colour that pairs with your chosen Seadek colour, as this floor colour will be visible in the Seadek panel gaps. Black or white is typically the most suitable choice.

ANY QUESTIONS?

1-289-804-LUXE (5893)

LUXEMARINE.CA

IMPORTANT:

Seadek is crafted with durability in mind, yet its longevity is contingent upon the strength of the surface to which it adheres. Employing high quality paints and materials, and meticulously preparing your floor, will significantly enhance its performance. During our installation visit, our installer will assess any concerns regarding surface quality and its preparation.

Please be aware: We retain the right to levy charges for any necessary reapplications or recuts resulting from improper surface preparation during our one-year installation warranty period, specifically applicable to glued-in carpet replacement projects.
